Title: **ForeFlight, Maps, New Features and Layers**

presenter: ForeFlight Maps QA engineer Jason Staloff

This Zoom was an introduction to ForeFlight map features added within the past year and a brief tutorial on how to use the map features in ForeFlight. *Unfortunately, due to poor internet stability, there are times when delays and connection issues interfered with the reception. These glitches are part of the recording, but the basic material can still be understood.*

In this ComancheZOOM Jason demonstrates and discusses the new features that ForeFlight has added within the past year. New Map features include Profile Attitudes, Global Graphical NOTAMS, Nav aids Operational Notes, Delays/Stays, Hazard Analysis, Basemap Improvements, Quick Filters (Airways, Nav aids, Waypoints), 3D, Airports Along the Route, Directional Airways, Profile for iPhone, 3D Obstacles, Route-Based Pack, Tracklog Trim, Data Driven Minima, Hold Advisor, and 3D Runway Lights.

He also covers menu access to Map features and their use in route planning.

Jason is a private pilot working at ForeFlight as a test analyst in the Maps department, and as such has a thorough knowledge of the Maps and how they work. He earned his Private Pilot License in 2007 and gets around New England in a 1968 Cessna 150. He has been using ForeFlight Mobile since it came out.

He will be demonstrating some of the new Maps features ForeFlight has introduced over the past year. The follow-up questions at the end provide a wealth of additional information.

We wish to thank the Spokane FSDO for their support in helping us provide Wings credit.
